

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
This entry documents a medium severity phishing alert triggered by a malicious email received by an HR employee. The threat actor used a password-protected spreadsheet to bypass security filters, resulting in a malicious payload executing on the employee's workstation. Upon investigating the file hash using VirusTotal, I identified the malware as Flagpro. It was flagged by over 50 vendors with tags including backdoor, trojan, and indicators associated with Advanced Persistent Threat (APT) actors. Furthermore the email contains grammatical errors and the sender's email is different from the name in the body of the email. T is for this reasons I have deemed it fit to escalate this ticket for further scrutiny by the tier 2 SOC.

Additional information

Known malicious file hash:
